

Renal function in cardiac surgery

Clinical and experimental studies

Oscar Kolsrud

”The Visible Man” plastic model assembly kit (Revell) that the author received as a Christmas present in 1981 at the age of eleven, and that sparked a long lasting interest in human anatomy and physiology. Note the incorrect coloring of the skeleton and several internal organs, and the shaky outlining of the arteries and veins. The receiver of the gift has later tried to improve on his handicraft skills.
